RESEARCH INTEREST

I am generally interested in exploring the theoretical foundations of machine learning and developing methods with sound theoretical guarantees. Currently, I focus on developing provably adaptive and reliable methods for *non-stationary and open-world environments*. My research topics include:

- **Non-stationary Online Learning and Decision-making:** We develop online learning methods that adapt promptly to non-stationary environment with dynamic regret guarantees
 - *Key Words:* *online optimization, bandits, reinforcement learning, dynamic regret bound.*
- **Learning in Open-world Environments:** We develop reliable methods to learn with weak supervision and handle unknown classes with excess risk guarantees.
 - *Key Words:* *distribution shift, weakly supervised learning, unknown classes, excess risk bound.*
